Sudoku Python Project

Nod Coding Bootcamp – First Project

Sheila Géa | Jonathan Avigdor

Introduction

What is sudoku and why we choose to build a sudoku game??

	3			 				
			1	9	5			
		8		 	 		6	
8	 			6	 		 	1
8			8		+ ! !		+ ! !	1
	i			2				
	6				1	2	8	
			4	1	9		 ! !	5
							7	

A logic-based puzzle where the goal is to fill a 9×9 grid so each row, column, and 3×3 subgrid contains digits 1 – 9 without repetition.

	3				 			
			1	9	5			
	 	8		 	+ 		6	
8	 			6	 			
4	 		8	 	; ! ! !			1
	 			2	 		 	
	6			 	! !	2	8	i !
	 		4	1	9			5
				 	T		7	

Why we chose it:

• Fun and challenging

 Combines logic, algorithms, and user interface

Good exercise for Python fundamentals

Project Goals

Using functions and Game Logic

Practicing coding

Practicing using the material learn so far in the course

Working in pairs

First time thinking and coding in pairs

Presentation

Presenting the project in front of the group

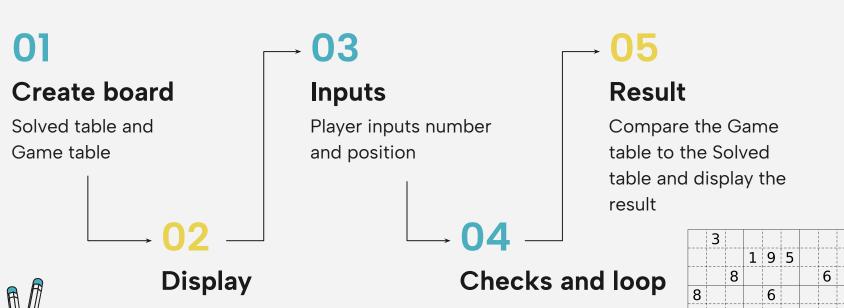

Github

Collaborating using same file on Github

Feedback

Practicing on receiving feedback in class

How the game works:)

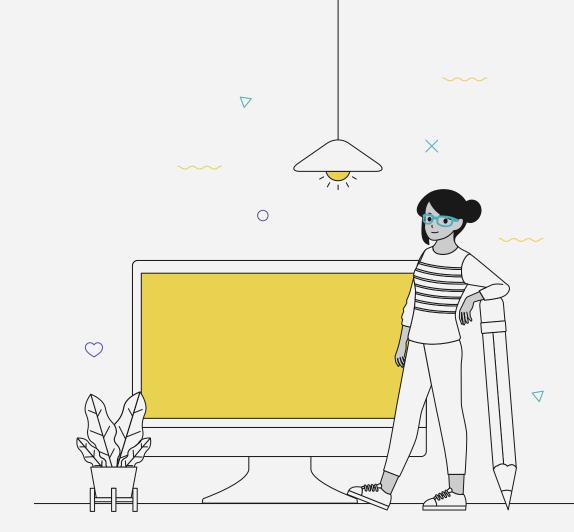

Player get to see the ready to play Game table

Check if the position is free and if the board is finish

	3	 		 				
			1	9	5			
		8					6	
8		 		6				
4			8					1
				2				
	6					2	8	
			4	1	9			5
	 				1		7	

DEMO

LET'S_PLAY!

Challenges & learnings!

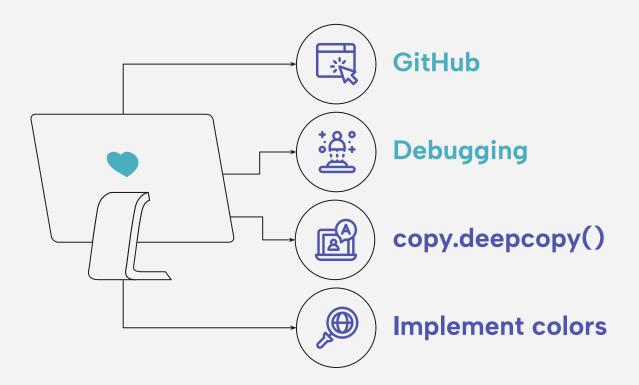

猿も木から落ちる (Saru mo ki kara ochiru) – "Even monkeys fall from trees."

Japanese proverb
